T022: Webroot

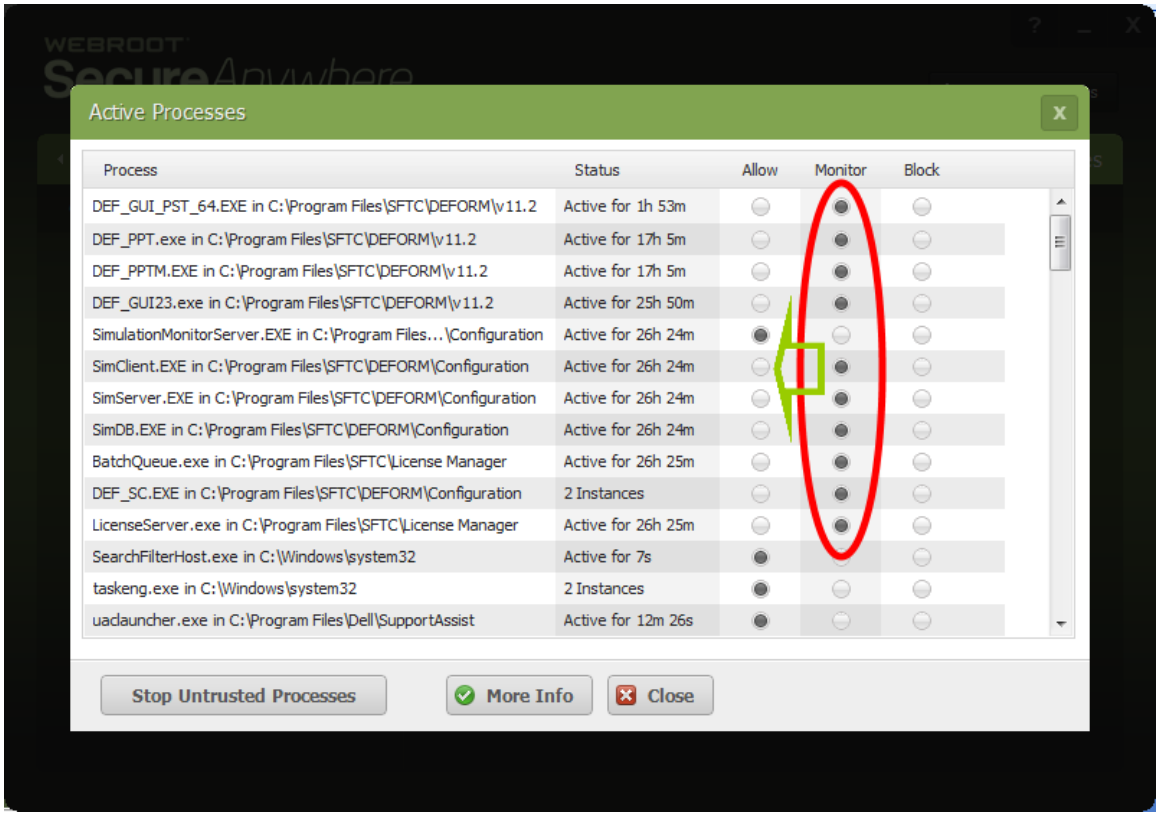

WEBROOT security software may interfere with the operation of some DEFORM components, including the License Server, in version 11.2. The License server will run for a few days after installation, then abruptly stop working for no apparent reason.

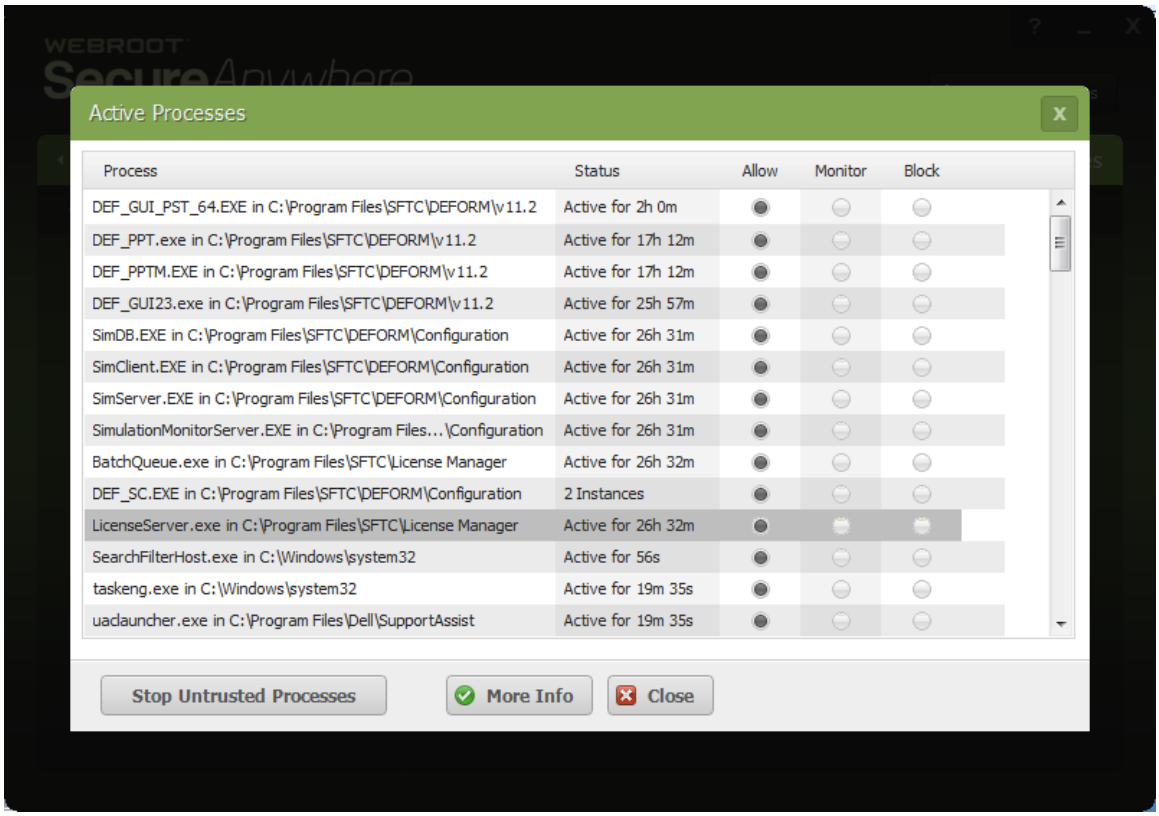

The following shows how to allow DEFORM binaries to be allowed to operate without interference from WEBROOT.

WEBROOT
SecureAnywhere
Advanced Settings
Protected
SecureAnywhere is protecting your computer. No active threats have been detected.

Control Active Processes
SafeStart Sandbox
SecureAnywhere gives you full control over active processes and system functions, enabling you to allow, block, or monitor any process on your computer.
Start
Execute suspicious programs in the SafeStart Sandbox to limit their ability to modify the computer until you are sure they are legitimate.
Run SafeStart Sandbox
